Declaration of TSE and BSE Free Products

Transmissible Spongiform Encephalopathies (TSE) and Bovine Spongiform Encephalopathy (BSE) are serious neurodegenerative diseases affecting the brain and nervous system of animals. These diseases can be transmitted to humans through contaminated animal products, underscoring the importance of ensuring product safety.

MICROSOLV proudly declares that all our products are free from TSE and BSE. We implement rigorous quality control measures and sourcing practices to guarantee the safety and integrity of our products. Our manufacturing process does not involve any ingredients of animal origin, nor do our products come into contact with animal products during storage and transportation. Therefore, all MICROSOLV goods are certified free from Transmissible Spongiform Encephalopathy (TSE) and Bovine Spongiform Encephalopathy (BSE). Additionally, we affirm that our products are Dioxin Free.

For any questions or inquiries, please contact your MICROSOLV Sales or Customer Service Representative.
