

Does MicroSolv offer a low adsorption tubing suitable for protein analysis - FAQ

The closest tubing we could recommend would be low pressure use, <u>FEP tubing</u> or <u>PTFE</u> <u>tubing</u>.

PTFE has micro-pores, and proteins may 'creep' in there. FEP is preferred because it has the same chemical stability but without the micro-pores. However, you would have to test it for your proteins as we could not guarantee it would be appropriate for every protein application. Aside from that, the only dedicated low-adsorption tubing would use a special surface pre-treatment, which we do not carry amongst our products.

Click <u>HERE</u> for low pressure tubing ordering information and pictures.
