

Furazolidone Analyzed with HPLC - AppNote

API and Related Compounds Separation

Furazolidone was Separated from related compounds in a commercially available pharmaceutical preparation. Excellent Peak shape and Selectivity from the related compounds was achieved with this Robust Method making it a great choice for QC applications even when using aggressive Mobile Phases that include acids. Molecular weight of Furazolidone is 225.16.

Furazolidone

Method Conditions

Column: Cogent Bidentate C18™, 4µm, 100Å

Catalog No.: <u>40018-15P</u> **Dimensions:** 4.6 x 150mm

Mobile Phase: 12% Acetonitrile / 88% DI Water / 1% Acetic Acid

Temperature: 30°C Injection vol.: 20µL Flow rate: 2mL / minute Detection: UV @ 365nm

Note: This antibiotic drug is used to treat diarrhea and enteritis caused by bacteria or protozoan infection. Also used as a veterinary medicine for salmonids and Myxobolus cerebralis infection.
