PRODUCT SHEET

MICROSOLV TECHNOLOGY CORPORATION
HPLC Columns and Chromatography Accessories

Catalog Number

82361-05P-3M

HPLC Column, NP Silica, Wide Pore, 3um, 4.6mm ID x 50mm Length, 300A. Cogent Brand. 1 EA.

Additional Info

Cogent NP Silica™ Wide Pore HPLC Columns are designed for the separation of large hydrophilic and polar compounds using Normal Phase and HILIC chromatography modes. Manufactured from ultra-high purity, low metal content 300Å silica that is not chemically modified, this stationary phase provides the native silica selectivity required for challenging separations involving larger molecules. NP Silica™ Wide Pore is widely used as an alternative for USP L3 methods involving biomolecules and other high molecular weight compounds, as well as for new analytical method development.

82361-05P-3M is packed with 3 µm NP Silica™ Wide Pore particles in a 4.6 mm ID x 50 mm analytical format. The short 50 mm length is optimized for rapid analysis, method development, and high-throughput screening applications. The 3 µm particle size delivers higher chromatographic efficiency and sharper peak shapes than comparable 5 µm columns, although increased operating backpressure should be expected. The 4.6 mm ID format is fully compatible with standard analytical HPLC systems and established analytical methods.

NP Silica™ Wide Pore is commonly used for large hydrophilic and polar compounds in both ...
