## 95296-ROLLER

**Roller for sealing Film or Mats in the U-2D Micro-Sample Management System. 1 EA.**

### Additional Info

Ensure consistent, reliable sealing of films and mats with a rolling application tool designed for efficient use in micro sample workflows. This roller applies even pressure across the sealing surface, improving adhesion and reducing the risk of incomplete sealing. Its smooth rolling action allows for quick application across all wells, making it ideal for high throughput laboratory environments.

95296-ROLLER is used to complete the application of sealing films or mats by rolling over the surface with controlled, light pressure. This burnishing action ensures a secure, uniform seal around all wells and inserts, helping to minimize evaporation, contamination, and sample loss. The rolling design reduces operator variability compared to manual pressing methods, improving reproducibility and workflow consistency.

This roller is compatible with the U 2D™ Micro Sample Management System and standard 96 well plates, making it a versatile accessory for a wide range of laboratory applications. It is especially useful in workflows requiring frequent sealing of plates where speed, consistency, and reliability are critical.
